

Module 3 Project Rubric

PromptLab | Documentation & Spec Sprint | AIE 500 - 10x Coding with AI

C2.1-C2.3 | C2.1 and C2.2 are provisional until Module 4.

Document the repaired backend, specify both required features before implementation and demonstrate the effect of project-specific agent instructions.

Evidence to prepare

- specs/prompt-versions.md and specs/tagging-system.md, including goals, user stories, testable acceptance criteria, data, endpoint shapes and failure cases.
- README.md, docs/API_REFERENCE.md and accurate function/class docstrings across models, API, storage and utilities.
- A project-specific instruction file and docs/agent-effect-note.md showing an authentic before-and-after output change.
- Continue the repaired backend. Keep the two new features as specifications here; implement one in Module 4 and the other in Module 5.

Provisional review

C2.1 and C2.2 are checked here, then judged finally against the implemented system in Module 4. C2.3 is assessed here. No separate MUST PASS criterion is assigned to Module 3.

How grading works

Every criterion is **Met** or **Not Yet**. There are no points, percentages, weights or bonus credit. All criteria in a competency must be Met; nothing is averaged.

Three attempts are available per module evidence group. Returned submissions do not consume an attempt, but require a revision plan. Re-assessment covers Not Yet criteria and any evidence affected by the changes. Follow the Syllabus for policy and course instructions for submission timing.

Returned before assessment: Missing deliverables, failing provided tests, an application that does not run or committed secrets. Rotate exposed credentials before resubmitting. Work belonging to another person or reconstructed logs/history are referred for academic review.

Module 3 | Assessment criteria

C2 - Specification-Driven Development & Automated Quality Engineering

C2.1-C2.3 | C2.1 and C2.2 are provisional until Module 4.

Criterion	Where your evidence lives	What earns "Met"	Common mistakes
C2.1 Your specs are specific enough Provisional until Module 4	specs/prompt-versions.md, specs/tagging-system.md	Each spec has overview and goals, user stories with acceptance criteria, data model changes, API endpoints with request and response shapes, and specified error conditions and edge cases. Every endpoint has at least one acceptance criterion you could write a test from directly.	- Requirements that name a feature without describing behaviour. - Specifying the happy path and leaving errors unstated. - Criteria you can't test, like "handles input correctly".
C2.2 Your docs match your code Provisional until Module 4	README.md, docstrings in models.py / api.py / storage.py / utils.py, docs/API_REFERENCE.md	Docstrings on every function and class across all four source modules, with parameters, returns and exceptions matching the implementation. API reference documents every endpoint that exists - including PATCH and your Module 4 feature - with request examples, sample responses and error formats. README setup steps work on a clean clone.	- API reference describing an earlier draft of the spec. - Docs not updated after Module 4's feature work. - Setup steps missing an environment variable or dependency. - Docstrings that restate the function name.
C2.3 Your agent instructions do something	.github/ copilot-instructions.md or .continuerules; docs/agent-effect-note.md	The file states standards specific to PromptLab - its patterns, naming, error handling, testing expectations. The note shows one concrete before-and-after case where generated output changed because of it.	- Generic best-practice advice that would suit any project. - No evidence it affected any output. - Standards in the file that your own code contradicts.

Current course tool mapping. The source rubric names Copilot/Continue instruction files. For the course's Codex/Claude workflows, use AGENTS.md or CLAUDE.md. The same PromptLab-specific standards and observed before-and-after effect are required.

Source: PromptLab Grading Rubric v2.1. Original Modules 1-5 map to current Modules 2-6. Criterion standards are retained; module/tool references are updated. The Syllabus governs policy.
