

Module 6 Project Rubric

PromptLab | Recorded Defense | AIE 500 - 10x Coding with AI

C3.6-C3.8 | C3 is Mastered only when all eight C3 criteria are Met.

Explain your own submitted PromptLab application, trace a request end to end and evaluate your actual use of AI. No new coding feature is assigned.

Evidence to prepare

- Final repository link and named commit, with the application, run/deployment instructions and accumulated evidence from Modules 2-5.
- The instructor-issued prompt set: explain the selected code, not a substitute you choose yourself.
- A 12-20 minute continuous screen-and-audio recording, code visible, submitted within 48 hours of receiving the prompt set; no cuts or other person assisting.
- Substantive what/why/removal explanations, one complete request trace, one design decision defended and traceable AI override/error/cost evidence.
- Written follow-up answers if requested, within two further business days. You may read code; explanation is assessed, not memorized or polished delivery.

MUST PASS: C3.6 - You can explain the code we pick

A Not Yet on this requirement returns the submission without reviewing the remaining criteria in this module.

How grading works

Every criterion is **Met** or **Not Yet**. There are no points, percentages, weights or bonus credit. All criteria in a competency must be Met; nothing is averaged.

Three attempts are available per module evidence group. Returned submissions do not consume an attempt, but require a revision plan. Re-assessment covers Not Yet criteria and any evidence affected by the changes. Follow the Syllabus for policy and course instructions for submission timing.

Returned before assessment: Missing deliverables, failing provided tests, an application that does not run or committed secrets. Rotate exposed credentials before resubmitting. Work belonging to another person or reconstructed logs/history are referred for academic review.

Module 6 | Assessment criteria

C3 - End-to-End AI-Assisted Application Delivery

C3.6-C3.8 | C3 is Mastered only when all eight C3 criteria are Met.

Criterion	Where your evidence lives	What earns "Met"	Common mistakes
C3.6 You can explain the code we pick (MUST PASS)	Recorded defense, responding to the issued prompt set	For the file and function we name, you explain what it does, why it's structured that way, and what would break if a specified part were removed.	- Reading the code aloud or paraphrasing your own comments. - Steering toward code you know better. - Not being able to say what a function you submitted is for.
C3.7 You can trace a request	Recorded defense	You follow one user action from the frontend event, through the API call, the backend handler and the storage layer, and back to what renders - naming the actual components in your repository.	- Stopping at the API boundary. - Describing layers in general architectural terms rather than in your app. - Not being able to find where the request is handled in your own repo.
C3.8 You evaluate AI honestly	Recorded defense and written follow-up	At least one time you overrode or rejected AI output and why, and one specific incident in this build where AI was wrong or unhelpful and what it cost you. Both traceable to your prompt log, commits or verification note.	- General commentary about AI's strengths and weaknesses. - Saying you never disagreed with it. - Incidents not traceable to this project's history.

A working app cannot replace the defense. A working application with an inadequate selected-code explanation does not complete C3 because C3.6 is MUST PASS. A strong defense cannot compensate for an application that does not run.

Recording and re-attempts. Cuts or edits require a re-record without consuming an attempt. Each defense re-attempt uses a fresh instructor-issued prompt set with different code. Written clarification cannot replace a required explanation omitted from the recording.

Source: PromptLab Grading Rubric v2.1. Original Modules 1-5 map to current Modules 2-6. Criterion standards are retained; module/tool references are updated. The Syllabus governs policy.
